

■軸流泵浦進流池的設計參考

SUCTION FLOW ZONE DESIGN REFERENCE FOR SUBMERSIBLE AXIAL PUMP

進流池在設計階段如果形狀和尺寸不適當，從水流動觀點來看有幾項問題，將會造成泵浦嚴重的損壞。特別是水吸人時的表面渦漩，將空氣和水的混合吸入；水流動產生的嚴重亂流及構成停滯的區域等。為預防不良情況，把問題降到最低，以下幾項建議應該納入考慮。

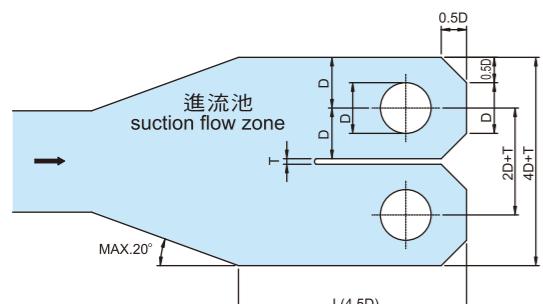

- 吸入的流速的液體應該保持固定 (流速0.3~0.5m/sec)
- 進流池的水深和地形的變化，傾斜的程度是30°~45°。
- 應該要將進流池區域填滿混凝土。
- 若有兩台以上泵浦運轉，整個吸入區需要安裝牆壁保護。
- 若有兩台以上泵浦運轉，進流池必須要避免有任何突然的障礙，適當的偏離角度不可大於20°。

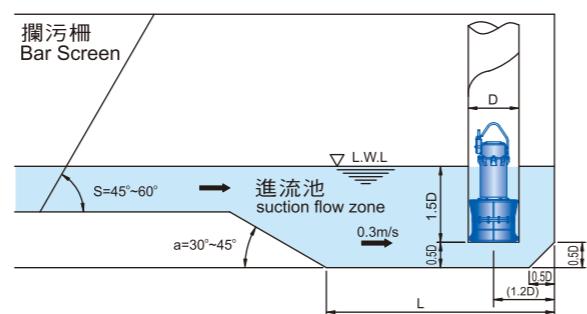

單台泵浦運轉
In case of one pump operation

If the insufficient shape and dimensions of the suction flow zone are adopted at the design stage, and from hydro-dynamical point of view there are severe serious problems might arise. Especially eddy current of the surface water, air mixing with water, heavy turbulence of water flow and the formation of stagnant zone. In order to prevent or to reduce such causes of the problems there are sever things need to considered.

- The liquid of suction flow speed should be kept constant (flow speed 0.3~0.5m/s).
- Suction flow zone of water depth and floor slop variation of slope angle should be 30°~45°.
- Suction flow zone should filling up with concrete.
- In case of two pumps operation, eddy current protection wall must be installed in the suction zone.
- In case of two pumps operation, any sudden obstacles at the suction flow zone must be avoided and Maximum divergent angle must not more than 20°

兩台泵浦運轉
In case of two pumps operation

整個吸入區的需要安裝牆壁保護
In case of eddy current protection device equipped

遊樂區用水
Water supply for amusement park

灌溉用水
Irrigation

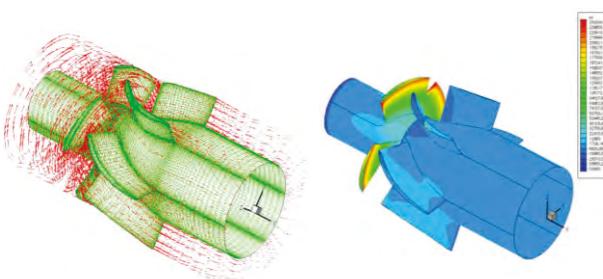

低窪地區抽水站
Pump station for low level surface

■特點 FEATURES

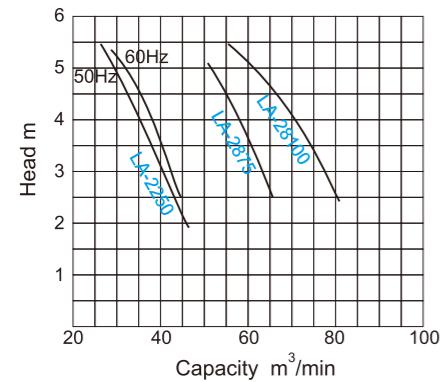

- 高效率馬達直接傳動葉輪，省電效率高。
- 泵浦結構堅實，電纜線經EPOXY防水處理、雙組式機械軸封、防塵防水等級IP68，可長期運轉使用。
- 軸心、葉輪精確平衡，運轉安靜，壽命長。
- 保護裝置標準配備：馬達溫度過熱保護器，軸封室洩漏檢知器，其他保護裝置可選購。
- 電腦3D葉輪及導葉流場設計，提升泵浦的效率。
- High efficiency motor directly connect to impeller for best energy saving.
- Pump manufacture with firm structure, cable lead isolated by harden epoxy for water proof, double mechanical seal, and IP68 dust free and water proof for long period of performance.
- Shaft and impeller is been precisely balance for quiet and long life performance.
- Standard protector: Miniature thermal protector, mechanical seal leakage detector.other optional protector device can be apply.
- 3D computerizes impeller and vanes conductive design for higher pump efficiency.

■用途 APPLICATIONS

- 工廠進水、供水及排水。
- 發電廠冷卻用供水。
- 污水處理系統進水、排放。
- 水利工程大量抽水、排水。
- 農業大面積灌溉用水。
- 其它應用：船塢排水、河流排水。
- Water supply or drainage for industrial.
- Water supply for cooling in the power plant.
- Drainage of waste water treatment.
- Used for large volume dewatering.
- Water supply for agriculture irrigation.
- Others : Extraction of water from dock and river.

■主要標準規格 SPECIFICATION

泵浦 Pump	口徑 Discharge	550~700 mm
	吸液 Pumping liquid	液溫 Liquid temp. 0~40°C
		液質 Liquid nature Rainwater、污水、工業用水、灌溉和養殖取水 Waste water、industry drainage、Agriculture irrigation, Aquaculture water
	構造 Structure	葉輪 impeller 軸流式 Axial
		軸封 Mech. seal 雙組式機械軸封 Double mech. seal
		軸承 Bearing 組合滾珠軸承 Ball bearing
	材質 Material	上蓋 Upper cover FC-200
		罩殼 Casing FC-200
		葉輪 Impeller Bronze / Stainless steel
		耐磨環 Wear ring SUS304
電動機 Motor	軸封 Mech. seal	SIC+超硬合金 Hard alloy
	保護裝置 Protect equipment	軸封室洩漏檢知 Seal room water detector
	型式 Type	乾式水中型 Dry motor
	頻率 Frequency	50/60Hz
	相數 Phase 電壓 Volt.	3Ø、380~460V
	絕緣 Insulation	F class (155°C)
	保護裝置 Protect equipment	溫度過熱保護器 Miniature thermal protector
	材質 Material	外殼 Frame FC-200
		主軸 Shaft SUS420J2
		電纜線 Cable 橡膠 Rubber

註：特殊規格可訂製

■保護裝置說明 (可選購) PROTECTOR DESCRIPTION (Optional)

- 溫度過熱保護器：馬達線圈及軸承座可安裝溫度過載保護器，防止馬達因無水運轉或其他異常造成過熱燒損。
- 洩漏檢知器：軸封室、馬達室、接線室可安裝洩漏檢知器，避免因水分滲入而造成馬達燒損或漏電。
- MTP (Miniature Thermal Protector)：Motor winding and bearing bracket can be embed with MTP to prevent motor operating in dry or unusual condition cause motor over heating.
- WD (Water detector): Mechanical Seal chamber, Motor chamber, and wiring chamber can be installing WD to prevent water entering in case failure.
